

Maison Mikell Launch Plan

Prepared for Victor, April 10, 2026

Overview

This package turns Maison Mikell from a working household MVP into a launchable paid product with a production checklist, app-store packaging plan, pricing strategy, and a focused marketing plan.

Core recommendation: Freeze major feature expansion for now and focus the next cycle on production quality, app packaging, onboarding, billing, and positioning.

1. Production Readiness Checklist

Objective: Move Maison Mikell from "works for our household" to "safe to sell to other households."

Product reliability, must complete

- Verify the sign-in flow on the real deployed app, especially the join-screen flash issue.
- Audit all loading, empty, and error states across planner, calendar, shopping, admin, and join flows.
- Add crash and error tracking, recommended: Sentry.
- Add product analytics for core events.
- Confirm Firestore rules cover all intended household actions safely.
- Review reminder flows for duplicate sends, partial failures, and silent failures.
- Add a recovery path for failed writes and offline or reconnect edge cases.
- Make sign-out, session expiry, and membership transitions predictable.

Core analytics events

- account_created
- signed_in
- household_joined
- invite_code_used
- task_added
- task_completed
- shopping_item_added
- shopping_item_checked
- reminder_sent

Data and operations

- Define backup and export strategy for household data.
- Add an internal admin and debug checklist for production incidents.
- Remove or hide any consumer-visible debug text before launch.
- Document Netlify deployment recovery steps.
- Repair Git-based Netlify deployment configuration or replace it with a trusted deploy workflow.

Legal and trust

- Privacy policy
- Terms of service
- Support email and support flow
- Account deletion or request flow
- Basic data retention policy

Product polish

- Redesign color system and core visual language.
- Tighten spacing, typography, and interaction consistency.
- Improve onboarding clarity for first-time users.
- Add a cleaner household invitation experience.
- Review mobile responsiveness across common iPhone and Android sizes.

2. App Store Packaging Roadmap

Recommendation: Use Capacitor to wrap the existing Vite + React app for iOS and Android.

- Fastest route to shipping on both stores
- Preserves the current codebase
- Supports gradual addition of native features later
- Avoids premature full native rewrites

Target architecture

- Frontend: existing React and Vite app
- Backend: Firebase Auth and Firestore
- Hosting: Netlify for web
- Mobile shell: Capacitor

Phases

- Prepare the web app for native wrapping.
- Add Capacitor and generate iOS and Android projects.
- Set up native shells, signing, icons, and device testing.
- Prepare store assets, policy URLs, and review metadata.
- Decide and implement billing compliance for native subscriptions.

First milestone: create a mobile implementation branch and get a working internal install on one iPhone and one Android device before store-polish work.

3. Pricing and Offer

Maison Mikell should launch as a paid product, with no free tier.

Recommended launch offer

- **Founding lifetime access:** \$179
- Available for the first 7 days after public launch
- Positioned as founding-member pricing

Recommended standard pricing

- **Monthly:** \$12/month
- **Yearly:** \$96/year

Positioning: The home operating system for couples. One calm place for maintenance, shopping, reminders, and household coordination.

4. Marketing Plan

Goal: Prove that households outside Victor and Riah's own home will pay for Maison Mikell.

Ideal first customers

- Couples sharing a home
- Busy homeowners
- Households that already feel coordination friction
- People who want calm, not hyper-optimized productivity culture

What can be executed next

- Homepage copy and positioning refinement
- App Store and Play Store listing copy
- Launch FAQ and launch emails
- Founding-offer landing page copy
- Screenshot plan and demo script
- Warm outreach list and community post drafts

30-day plan

- Foundation: pricing, positioning, launch page, legal pages
- Asset creation: screenshots, demo walkthrough, launch posts
- Controlled launch: warm network, a few outside households, fast feedback loop
- Expansion: broader content and outreach, testimonials, close founding offer after 7 days
